

AMENDMENTS TO THE SPECIFICATION

On page 29, please replace the abstract as reflected in the following marked-up version:

ABSTRACT OF THE DISCLOSURE

~~The present invention relates to methods~~ Methods, apparatuses and a system in connection with pushing of packet data from an originator to a wireless communication station ~~[[20]]~~ are provided. When a network address is received by the wireless station ~~[[20]]~~ from a server ~~[[50]]~~ wishing to push packet data to the wireless station, the received network address is checked against stored predefined network addresses. If the received network address is found among the stored network addresses, the originator is verified, preferably by using an address translation server ~~[[40]]~~. Thus, in this way it can be determined that the originator indeed belongs to a predefined set of originators from which a mobile user wants to accept pushed packet data transmissions. A packet data session is then established by the wireless station with a verified originator in order to receive the packet data
